

# FAKE PILLS. REAL DANGER.

Fake prescription pills made of fentanyl, called "fentapills" have flooded social media and the streets. Don't take any medication that is not specifically prescribed to you by your doctor.

**Fentapills are:**

Marked to look like Oxycodone, Percocet or Xanax. Unevenly dosed, so you don't know how much fentanyl is in any one pill. Falsely advertised by dealers online and on the street.

**Fentanyl is:**

A synthetic opioid 50X more potent than heroin. Also found in cocaine, ecstasy and heroin. Responsible for approximately 70% of drug overdose deaths in the US.

Spread the word  
**NO RANDOM PILLS.**

LoveUnlimitedNJ.org

I am taking the Living to the Maxx Pledge because I'm concerned drug related deaths continue to rise in America. Each year, we're losing over 100,000 children & adults to Fentanyl poisoning and other drug related deaths. This number continues to climb. I understand drug traffickers & dealers are replacing plant-based materials with chemical materials like Fentanyl analogs & Xylazine, which are exponentially more profitable, easier to transport, extremely addictive, and deadly.

- ✓ I pledge to educate myself, my friends, and my family on the NEW deadly drug landscape to keep us safe and alive
- ✓ I pledge to only take prescription pills prescribed to me by my doctor and purchased through my pharmacy
- ✓ I pledge to not share, sell, or condone the use of counterfeit prescription pills, cocaine, heroin, or non-dispensary marijuana
- ✓ I pledge to learn about harm reduction tools to help save lives
- ✓ I further pledge to destigmatize mental health and substance use, prioritize my own mental health and wellbeing, and to reach out for help when I need it
